

Attachment Z: Safe Harbor

Humanity Implements Planetary Solutions to R/R GHG/Heat to Reach Soft Landing/Safe Harbor

- Humans must intervene immediately to R/R GHG/Heat and go from “W” to “X” to “Y” and Finally to “Z”
- This requires human intervention and massive amounts of zero-carbon energy and new technologies to deliver GHG/heat reduction/removal to get to “Z”
- Humanity must begin this process immediately to reduce the negative effects of the climate overshoot (Period of Time When Warming Increases Past 1.5°C)
- The more time passes before achieving R/R of GHG/Heat the more must be done to remediate the effects of the climate overshoot
- To achieve this, humanity needs a combination of the brightest governments, businesses, scientists, experts, universities, NGOs and nations to implement solutions to reach safe harbor
